claim the process comprising the following steps:

1. A chemotherapeutic agent attached to a monoclonal antibody. The antibody is combined with DNA to yield a heteropolymer. The drug heteropolymer is injected in a therapeutically effective amount.
2. The process of Claim 1 for cancer.
3. The process of Claim 1 for rheumatic disease.
4. A method of attaching a chemotherapeutic agent with a monoclonal antibody, combining the antibody with DNA to yield a drug-heteropolymer, and injecting the drug-heteropolymer in a therapeutically effective amount.
5. The process of Claim 4 for cancer.
6. The process of Claim 4 for rheumatic disease.
